ABOUT [View on site ↗](#)

Who I am

Hi there! I'm Serhii Lozovskyi. Currently, my professional journey goes. With a unique background spanning roles as a CTO, Bubble Developer, Estimate Manager, and Product Manager, I bring a 360-degree perspective to every project - leading them effectively from the initial spark to a successful launch.

On the technical side, I have a deep-rooted expertise as a Bubble Developer. I build and maintain sophisticated web and mobile applications. Because I have a background in traditional coding—including HTML, CSS, JS, and NodeJS—I don't just "assemble" apps. I know how to correctly configure data access parameters (Privacy Rules), build secure architectures, and integrate virtually any third-party service.

Beyond traditional and no-code development, I leverage AI-powered tools to dramatically accelerate delivery. Using Claude Code and other AI coding solutions, I rapidly build prototypes and working MVPs—turning concepts into validated products in a fraction of the usual time. I combine these AI-assisted workflows with my engineering background to ensure the output isn't just fast, but also clean, secure, and production-ready.

Throughout my career, I've mastered an extensive tech stack. This includes: No-code/Low-code platforms like Bubble, Webflow and others; Databases and Cloud solutions such as AWS, SQL, Notion and Airtable; Automation tools like Make, Zapier, and n8n. Development with Claude Code and other AI solutions.

I also have significant experience in AI implementations (specifically OpenAI), building Web3 and Blockchain solutions (like Hedera and Metamask), and setting up complex API integrations—ranging from payment gateways like Stripe to deep Telegram and Discord integrations... and many others.

My core strength is the bridge I build between deep technical expertise and business-driven thinking. I'd love to discuss how my experience can help bring your next big idea to life.

Winery Management System

SAAS · TEAM LEAD · FULL STACK DEVELOPER · 5 MONTHS · 3

Winery Management System (WMS) is a platform for optimizing wine storage and sales processes, helping its users track wine inventory, create wine lists, and manage sales transactions.

RESPONSIBILITIES

- participated in all meetings
- Bubble development
- Creating a personal Bubble API
- JS integration
- Development of an analytics and reporting system
- Development of a dynamic wine menu where, depending on 3 levels of filtration and 2 levels of sorting, the appearance and the ability to export PDF changes
- Development of a system of locations in the middle of which different batches of different wines can be located
- Development of an admin panel for regulating all the possibilities of the site, confirmation and modification of orders, changing the content of sites
- Development of automatic generation of orders based on images using AI
- Development of adaptive layout of the entire application
- Privacy Rules are configured in detail
- There are also many other functions that I have highlighted the most interesting and complex functions.

Aroma Library

HEALTHCARE / EDTECH · FULL STACK DEVELOPER · TECH LEAD · V1 - 8 MONTH V2 - 1 MONTH, UNTIL NOW V3 - NOT START · 8

Your Ultimate Learning Platform for Aromatherapy, for beginners and experts alike

Quickly find the right essential oils, formulations, and evidence-based insights to create personalized solutions for your clients - saving you time while ensuring safe, effective results.

Whether you're new to aromatherapy or an experienced practitioner, project offers reliable information, research-based guidance, and a space to connect with like-minded enthusiasts worldwide.

How is project different from other aromatherapy resources?

Our platform is founded by clinical aromatherapists with 30+ years of experience. We focus on science-backed insights, ensuring safe and effective essential oil use for both personal and professional needs.

RESPONSIBILITIES

- participated in all meetings
- Bubble development
- Creating a personal Bubble API
- JS integration
- Move BD from Xano
- Creating with bubble Complex Filters (Comparison: thing with thing, list with thing, thing with list, list with list, thing of number with list of ranges of numbers, thing of number with range of number)
- Development of adaptive layout of the entire application
- Connection Google analytics
- Forming links by passes relative to the user's route through the pages
- Localization of the entire site into two languages with the ability to add more languages
- Upload oil analysis from xlxs file, where two fields are compound name and percentage of oil content. If such a compound already exists, a new one is not created
- Develop a unit system that allows switching between different measurement systems and leaving the correct numbers in the selected measurement system relative to the one in which the recipe was created
- A payment system has been developed that allows you to save all invested funds when changing your subscription up or down, when switching from annual to monthly and vice versa. Two types of payment by invoice through Zapier and by card through Stripe
- Privacy Rules are configured in detail
- Each subscription has its own permissions that can be configured from the bubble side. If a subscription does not have a permission but the user tries to get it, he is offered to upgrade the plan.
- There are also many other functions that I have highlighted the most interesting and complex functions.

Big Idea Platform ↗

BLOCKCHAIN · TEAM LEAD · TECH LEAD · FULL STACK · CLOSE TO 12 MONTHS · 5

- A platform for creating ideas and patenting them using the blockchain. Additional communication with AWS and document reference database
- participated in all meetings
- Bubble development
- Creating a personal Bubble API
- JS integration
- Developed a duplicate entry in AWS and hashing in the Header of ideas to preserve their uniqueness and safety
- Privacy Rules are configured in detail
- Letters with dynamics and design were developed using Send Grid
- The possibility of selling ideas has been developed P2P, P2B, B2B,B2P
- Developed signing NDA inside the application for idea if there was such a setting
- Developed dynamic permissions for subscriptions that can be edited on the admin panel
- Internal analytics has been developed for both users, business accounts and admins.
- Each document (NDA, Idea, Purchase and Sale Agreement) is duplicated in AWS and hashed in the header, all information can be viewed
- An activity log system has been developed that allows you to view full information about what happened to some entities (for example: Viewing an idea by another user, any change to this entity, an agreement or file that was signed or associated with the entity, etc.)
- A system of collaborators with customizable permissions and roles for a specific owner of this entity has been developed
- Development of adaptive layout of the entire application
- A system for transferring some entities such as ideas of workshops, etc. has been developed.
- Each subscription has its own permissions that can be configured from the bubble side. If a subscription does not have a permission but the user tries to get it, he is offered to upgrade the plan.
- There are also many other functions that I have highlighted the most interesting and complex functions.

RESPONSIBILITIES

SOCIAL NETWORK · TEAM LEAD · TECH LEAD · PM · CLOSE TO 6 MONTHS · —

A Community For Artists To Share Work, Find Jobs, And Be Inspired all on a single platform.

ENTICE is a creative empowerment community focused on connecting artists and creative people to economic opportunities. We are doing this by building a platform to find inspiration, build your portfolio of work, find your own job opportunities, and sell your own products all in a single space.

I was the technical lead for this project and sometimes replaced the project manager.

RESPONSIBILITIES

- Quality control, deadlines, development of complex parts
- participated in all meetings
- Bubble development
- Creating a personal Bubble API
- JS integration
- Privacy Rules are configured in detail
- Development of adaptive layout of the entire application
- Letters with dynamics and design were developed using Send Grid
- The functions of liking, saving, sharing a post have been developed. Chatting within the community
- Marketplace platform developed
- Converted to webApp using BDK and released to AppleStore and PlayMarket
- There are also many other functions that I have highlighted the most interesting and complex functions.

Femme Nativa ↗

HEALTHCARE / FITNESS · TECH LEAD · TEAM LEAD · CLOSE TO 6 MONTHS · 4

Femma Nativa is a fitness app designed for women by women. Our mission is to help women feel great inside and look great outside. Our style of workouts is mostly low impact and includes cardio. All our workouts and programs are designed to get you lean and toned. And when most women start doing this type of workout, their body just transforms. They slim down, they become toned, and they start feeling more confident than ever. Inside the app you will find these:

1. At-Home Cardio Videos.

We've got you covered! There are a lot of quick workouts for you to choose from in our Challenges section, and we are continually adding new workouts to keep things fresh and exciting. Getting educated about fitness, nutrition, and health is incredibly important. Getting this type of knowledge will help you get results faster and teach you how to stay on track.2. Goal Tracking. Now you can track your progress all in one place. Upload your progress photos so you can see how far you've come on your fitness journey.

Need a little extra support and motivation (don't we all?!). You've come to the right place! Our community of women is friendly, and supportive and is on a similar journey to you. Create your accountability groups, send direct messages, or read through everyone else's posts and questions for motivation. And finally, we all know how important nutrition is for not only weight loss but your general health. So we have an 8-week nutrition plan that is tailored to your specific body type. It includes both a regular and vegan meal plan, with over 100 healthy recipes. And this nutrition plan is key to helping you achieve results long term. We have designed the Femme Nativa App to help users achieve long-term success

RESPONSIBILITIES

Recruitment Platform

HR / PSYCHOMETRICS · FULL STACK DEVELOPER · TECH LEAD · 4 MONTH · 4

We enable our clients to generate massive ROI by using scientifically validated psychometric tests to select the best candidates.

We charge you a simple and transparent flat fee per vacancy. That way, you can screen all qualified candidates, maximizing the validity of your hiring process.

We follow the scientific literature and develop tests that best predict on-the-job performance. Our tests are scientifically validated so you can be confident they actually work.

We recommend which assessments best suit your needs and advise you how to weigh the assessments to maximize predictive validity.

We also offer a comprehensive assessment creation tool so you can develop your own assessments or import assessments you are already using.

RESPONSIBILITIES

- participated in all meetings
- Bubble development
- JS integration
- Forming links by passes relative to the user's route through the pages
- Each user role has its own permissions that can be configured from the bubble side
- There are also many other functions that I have highlighted the most interesting and complex functions
- I took over the project after two previous teams and performed an extensive optimization and restructuring of both the database and UI elements. By streamlining the architecture, I achieved up to a 10x increase in performance in several areas, transforming a sluggish, unresponsive site into a smooth and user-friendly experience

AUTOMATION

[View on site ↗](#)

Automation that pays for itself

Lead processing

Set up automatic lead-card population for a company: submissions from Meta Lead Forms are parsed, every needed field is extracted and written straight into the CRM — zero manual data entry.

N8N

Meta Lead Forms

CRM API

Country from phone number

The CRM had no country detection. I added an automation: the moment a phone number lands on a lead, the 'Country' field updates instantly from the dialing code.

N8N

CRM API

Call processing & transcripts

Integrated Sembly (AI call assistant): it records and transcribes each meeting, then an automation searches the CRM for an entity by participants' emails across types (lead, user, etc.). If found, the transcript is attached to it; if not, a Slack alert is raised for manual handling.

Sembly

N8N

CRM API

Slack

CRM required-field guard

Required-field validation was a paid-tier CRM feature — so I built my own. Weekly it scans every record across all data types; if fields are missing it tags each salesperson in Slack for their own records, listing exactly what to fix. Clean next week? No tag. Records can be marked 'ignore' straight from Slack.

N8N

CRM API

Slack

Personalized lead outreach

+ AI

Personalized email campaigns to hot and cold leads, where every message is generated by AI. The model is fed data pulled from the lead's LinkedIn profile together with notes and fields from the CRM, then writes copy tailored to the lead's stage and context. Segments come from the CRM; messages are sent and tracked through SendGrid.

N8N

OpenAI

LinkedIn

CRM

SendGrid

Auto lead scoring

+ AI

Every new lead is scored automatically by source, budget and reply speed, then sorted into hot, warm or cold. Sales see a ranked list and work the best leads first, no manual sorting.

N8N

CRM API

OpenAI

Invoice and payment sync

Paid invoices from Stripe update the linked CRM deal to "paid" and trigger a thank-you email. Overdue ones raise a reminder to the client and a Slack ping to the manager.

N8N

Stripe

CRM API

Slack

SendGrid

Daily pipeline digest

Each morning the team gets a Slack digest: new leads, stage changes, deals with no activity for X days and today's scheduled calls. Managers start the day knowing exactly what needs attention.

N8N

CRM API

Slack

Other APIs

Stale lead re-engagement

Leads with no reply for a set period are pulled automatically and sent a personalized re-engagement message tuned to their last stage. Responses route back to the rep, the rest stay in a nurture loop.

N8N

CRM

Postmark

Review and feedback collection

After a deal closes or a project ships, the client gets an automatic request for feedback. Positive replies are routed to a public review link, critical ones go straight to the manager in Slack.

N8N

CRM API

Postmark

Slack

AI research agent

+ AI

Give it a company or a lead, and the agent gathers public data, builds a short profile with industry, size and likely needs, and writes it straight into the CRM card before the first call.

N8N

Claude

Web search

CRM API

AI inbox agent

+ AI

The agent reads new emails, sorts them by intent, drafts replies for routine ones, flags anything that needs a human, and turns real requests into CRM leads or tasks automatically.

N8N

Claude

CRM API

Gmail

Multi-agent pipeline

+ AI

Several agents work as a team: one qualifies the lead, one researches it, one writes the outreach, one schedules the follow-up. Each hands off to the next, with a human approving only the final step.

N8N

Claude

CRM API

Slack

Hospitality — Guest check-in agent

+ AI

Bookings from any channel sync into one place. The system sends pre-arrival instructions, collects guest data, and an agent answers common questions (wifi, check-out, parking) in chat around the clock, escalating only real cases to staff.

N8N

Claude

Booking API

WhatsApp

Hospitality — Review and reputation

+ AI

After check-out each guest gets an automatic feedback request. Positive replies are routed to public review sites, complaints go straight to the manager with a draft response, so issues are handled before they go public.

N8N

Claude

CRM

Email

Logistics — Shipment tracking and alerts

Every order is tracked across carriers. Delays, stuck parcels or failed deliveries trigger an instant alert to the client and the ops team, with the next action already suggested.

N8N

Carrier APIs

Slack

SendGrid

Logistics — Route and load planning

+ AI

Daily orders are grouped by zone and an agent proposes an optimized route and load order, cutting empty mileage and manual planning. Drivers get the ready plan on their phone.

N8N

Claude

Maps API

Telegram

Retail — Stock and reorder guard

Inventory is monitored across channels. When a product drops below threshold, the system drafts a reorder, flags slow movers, and warns about items about to sell out before a campaign.

N8N

CRM / ERP API

Slack

Retail — Price and competitor watch

Competitor prices and your own catalog are checked on a schedule. Significant changes raise an alert with a suggested price move, so you react in hours, not weeks.

N8N

Web scraping

Sheets

Slack

Finance — Invoice and payment reconciliation

Incoming payments are matched to invoices automatically. Paid ones update status and send a receipt, overdue ones trigger a polite reminder chain and a manager ping.

N8N

Stripe / Bank API

CRM

SendGrid

Finance — Expense and document agent

+ AI

Receipts and invoices sent to one inbox are read by an agent that extracts amounts, dates and categories, writes them into the accounting sheet, and flags anything that looks off for review.

N8N

Claude

OCR

Sheets

Real estate — Lead-to-viewing agent

+ AI

New property inquiries are qualified by an agent, matched to suitable listings, and offered viewing slots automatically. Confirmed viewings land in the agent's calendar with a reminder to the client.

N8N

Claude

CRM

Calendar

Healthcare / Services — Appointment flow

Bookings, reminders and rescheduling run automatically. No-show risks get an extra nudge, freed slots are offered to the waitlist, and the front desk stops chasing confirmations.

N8N
